## SOP\_Industrial electronics

Much has been mentioned in the motivation part of my application. Let me briefly highlight why I want to pursue my higher education in the field of industrial electronics? .As we know the changing global scenario in the field of technology. My undergraduate has inspired me a lot. Industrial electronics is a part of my undergraduate study. A 50 days industrial training during my undergraduate in the field of telecom which includes switching network, OCB, E-10B, intelligent network under Bharat Sanchar Nigam Limited, Manipur, India is also a part of my eagerness to join in this field. As our country, Nepal is a poor country in terms of every field. In order to uplift the nation as a whole we need to established state-of-the-Art industries where highly skills engineers and intellectual have to play a major role. If we look back to the history of the world we can definitely find the chapter of industrial revolution. I want to contribute my potential for the nation after getting higher education in the field of industrial electronic.

I also realize more and more that there is big gap between theory and practical. I hope this department is a useful addition to my education that I can use for my later professional career. This department will definitely increase my opportunities to get a good job. To further my career aspirations of becoming part of an engineering section, I want to obtain a Master's Degree in Electrical Engineering with emphasis on industrial electronics. Having this knowledge will allow me to better understand technical principles. With all the uncertainty and changes in with technological, I believe that technology must have a solid understanding, supported by a strong academic foundation, of how to guide companies through these challenging times.

I fully recognize that our technological environments are constantly changing, and thus management needs to be able to adapt quickly and accurately to the new conditions if the company is to survive, let alone prosper. I believe obtaining a Master's Degree will provide the necessary background for me to be to anticipate and react to ever-changing environments. It is my pleasure, if I can engage my all labor and ability to achieve knowledge from your Institute. I am confident enough that I could be able to accomplish higher study in the proposed field that will contributes to my future professional interest as well as to the society as a whole.

I firmly believe that if I could get a chance to cultivate my potentiality in Lappeenranta University of Technology in my purpose field I will definitely satisfy my thirst for higher study and it's a unique opportunity for me to get such kind of offer from an advanced country like Finland.

Above all, I would like to spend rest of my life by actively involved in this field to uplift the economic status of my country.
